

PUSHBOX[®]

An integrated solution for transportation and storage of high quality grains.

Why should PUSHBOX[®] system be a part of your business?

To **reduce** drastically the effect of **relative humidity** on hygroscopic goods stored and transported.

To **avoid** the **condensation** that develops because of the temperature differences typical between as a thermal jump between the tropical countries of origin and the cooler levels of the consuming countries.

To protect and **isolate** your goods **from contaminants** already present in the container at the moment of loading.

To **interrupt oxidation** and photonic attack due to sunlight and damages due to falling water, attack of insect or rodents or other environmental contamination in general.

To **inhibit** the development of **larvae** and **mould**.

To **eliminate the need for fumigation** in the origin countries and often at the arrival.

To **ensure** the certainty of the **net weight** of goods bought and transported with the consequent removal of the franchise from international contracts.

To **prevent** unwanted losses that could happen to bags before, during and after **inspections** or when the cargo is not under vigilance.

To **reduce costs** of loading and unloading of goods.

To **reduce insurance premiums**.

To **optimize** the weight ratio of **container volume** making the most of opportunities.

To **remove** the costs due to use of **absorbers of moisture**.

To **maintain the fragrance of grains** during shipping and storage.

To **protect quality** of goods stored and transported.
